PAD - FREE BRUSHES	21

All replacement brushes in our line are manufactured to exacting specifications and meet industry standards for quality and performance. Fill materials are carefully selected for maximum cleaning power and durability.

All cylinder replacement scrubber brushes use a non-porous, one-piece, extra strength plastic core. The plastic core is light weight and unaffected by moisture, and harsh chemicals. The core resists warping, cracking and chipping.

Our main sweeping brooms and scrubbing brushes feature exacting spline drive cores or a high impact plastic drive hub assuring extra strength, ruggedness, and long life.

For your convenience, all of our replacement brushes are cross-referenced with our stock number and those of the original equipment manufacturer.

Our replacement squeegee blades will keep your floors dry for a safe working environment. These squeegees will perform as well, and last as long, as the blades you now order - and they will cost less money.

POWER SWEEPER BRUSHES

Our staple set, tufted row construction brushes are on a heavy duty, lightweight, durable plastic core. The spiral, multiple row brushing action of main brooms improve pick up characteristics, places bristle on the sweeping surface at all times, and greatly increases vacuum efficiency.

ORDER THE RIGHT BRUSH FOR THE RIGHT JOB.

In choosing sweeper brushes, keep in mind that each brush type is designed for different conditions. As such, each brush will have built-in features that make it outstanding for some uses and less desirable for others. Listed below are explanations and job performance of different fill type and row constructions.

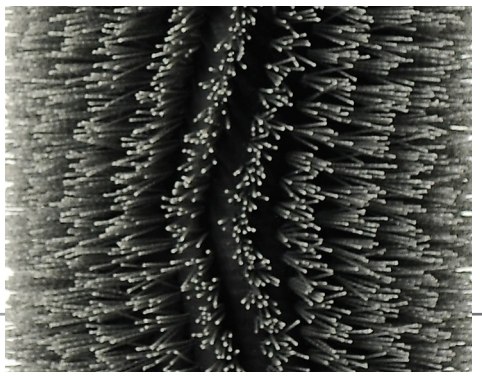
24SR Union/Wire - 24 Single rows of bristle - Medium to heavy dirt, high heat areas
24SR Nylon - 24 Single rows of bristle - All types soilage, high dust, smooth surfaces
8 DR Nylon - 8 Double rows of bristle - All types soilage, smooth to rough surfaces
8 DR Proex - 8 Double rows of bristle - Universal brush, rough areas, non-high heat
8 DR Proex/Wire - 8 Double rows of bristle - Heavy compacted debris, rough areas
8 DR Union/Wire - 8 Double rows of bristle - Heavy compacted debris, high heat area
8 DR Crinkle Wire - 8 Double rows of bristle - Compacted dirt and grime

SCRUBBING BRUSHES

Moisture Resistant Cores

All cylinder replacement scrubber brushes are manufactured with a non-porous one piece, extra strong plastic core. The core material is light weight, not affected by moisture and resist warping, chipping and cracking. It is also impervious to harsh chemicals. We have listed below the various bristle types and uses.

- 24SR Poly - 24 Single rows of bristle - Compacted soilage, general purpose scrub
- 24SR Light Abrasive - 24 Single rows of bristle - Medium build-up, grease, grime, stubborn stains
- 24SR Nylon - 24 Single rows of bristle - Light scrubbing for high gloss sealed floors
- 24SR Abrasive - 24 Single rows of bristle - Extra heavy build-up, longest brush life
- Our abrasive bristle is a Dupont "Tynex A®" bristle. It consists of nylon that is impregnated with abrasive grit particles. We offer 2 diameters of this bristle to give you the proper aggressiveness for your application.

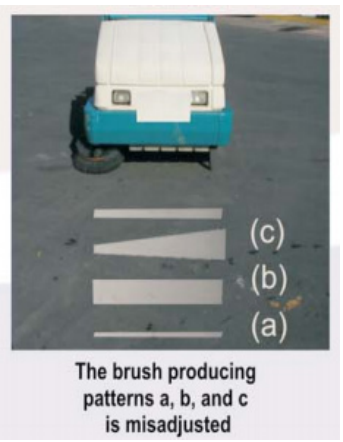


BRUSH ADJUSTMENT

When replacing the cylindrical brushes on your sweeper or scrubber, the suggestions below will give longer bristle life and maximum performance.

- Remove the old and install the new brushes following the directions in the equipment manual.
- Start the machine and lower the brush until you can hear or feel it sweep the floor. Don't lower the brush any further at this time. If you are installing brushes on a scrubber, ***do not*** turn on the water.
- Let the brush sweep the floor while you count to 20. Now, raise the brush and move the machine away. You should see a clean strip on the floor where the brush made contact. This strip should be $1^1/_2$" to 2" wide across its full length. If one end is wider than the other, the brush mounting needs adjustment. (Refer to your equipment manual.) Check the brush chamber to assure that the brush arms are free to move.

This adjustment is important!
Operating with a mis-adjusted brush mounting will reduce brush life, cause excessive vibration, and possibly damage the equipment.



The brush producing patterns a, b, and c is misadjusted

PAD-FREE BRUSHES

For improved floor maintenance

Super Abrasive features purple colored heaviest duty crimped nylon impregnated with silicon carbide for heavy duty scrubbing and extra aggressive stripping. Replaces brown and black pads. Great for extra build-ups on any concrete surfaces.

Abrasive Plus features black colored extra stiff crimped nylon impregnated with silicon carbide for heavy duty scrubbing and extra aggressive stripping. Replaces brown and black pads.

Abrasive is filled with grey colored, stiff crimped nylon impregnated with silicon carbide for aggressive scrubbing and fast stripping. Replaces brown and black pads.

Scrub-Grit II features blue colored, crimped nylon impregnated with silicon carbide for aggressive general purpose scrubbing. Replaces blue and brown pads. Great brush for cleaning grout lines or uneven surfaces.

Dyna-Scrub is filled with light green colored, crimped nylon impregnated with silicon carbide for light scrubbing, on vinyl, asbestos, sealed concrete, terrazzo and specialty floors such as slate and marble. Patent No. 3605347

ADVANTAGES OVER PADS

- Guaranteed to outlast pads 100 to 1.
- Costs significantly less than 100 pads. Reduces labor costs.
- No tearing or recentering.
- Performs equally well on new or old floors, and uneven floors.
- No loading or cleaning problems.

ADDED FEATURES: Metal mounting plates for all abrasive brushes.
